# Remote Desktop Connection

This manual explains how you can make a Remote Desktop Connection to a computer located on the TU campus through the website http://weblogin.tudelft.nl.
Note: Before you can connect to a computer remotely, the ICT department needs to give you the required access. You can arrange this through your teacher/supervisor, who then can submit this request to the Service Point.

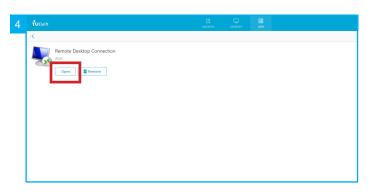

Go to https://weblogin.tudelft.nl and login with you NetID. Note: You will receive a login token on your cell phone.

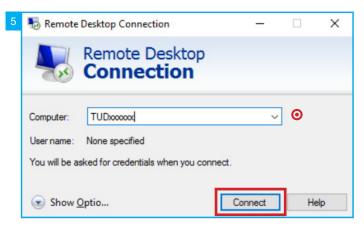

Click on **APPS** at the top of the screen.

Navigate to the **Remote Desktop Connection** app.

Click on **Open** to start the Remote Desktop Connection.

A window will appear where you need to fill in the assigned **TUD-number**. Then click on **Connect**.

Following you will be asked to fill in your **NetID** + **password**. Click on **OK** and you will be logged in on the computer.

TUDelft

At the bottom left of the screen there is a grey block, that makes the Start menu button of the computer that you want to access invisible. You can remove this by clicking with the right mouse button on the grey block and select **Auto hide**.
